

Saves Your Energy

Engineering services

At Ensto Industrial Solutions

Supporting your design process

Design files readily available for your processes

For your specific needs

Our innovative specialists are happy to support your engineering department in finding cost-effective enclosing solutions for your specific needs, saving your resources and making your processes leaner.

We are a reliable and flexible partner with experienced people. Our sound knowledge of many applications and various raw materials, including plastics and metal, make us a real expert in this field. You can rely on our competence, quality and financial solidity.

All our solutions and components meet the highest internationally recognized quality standards. Our proven performance and certified quality come from our fully equipped in-house laboratories and well-known external laboratories, which we use for certification testing.

Design files readily available

We support your end-solution design process by offering design files related to both our standard and customer-specific enclosing solutions, terminals and load break switches.

The files are then easy to use in your own design tools for further integration to the end applications.

Design files for our standard products are available via our web pages. If you need a larger number of different documents, we are happy to deliver those on request.

Design file formats available on our web page product cards:

- PDF, DWG, DXF, STEP and separate zipped step-files for example to E3 software

CuboLink Lite configuration tool

CuboLink Lite is an Internet-based configuration tool targeted at customizing our enclosures. The tool provides excellent support for the electronic order-delivery process by making the process leaner and faster.

The tool is simple to use. You can select the standard enclosure from our range and then easily perform the necessary con-

figurations. Openings and components can be added by using the drag-and-drop function. Customer-specific dimensioning is available for steel enclosures.

Download free of charge at www.ensto.com/cubolink

Ensto

Ensto is a family business an international cleantech company specializing in the development, manufacture and marketing of electrical systems and supplies for the distribution of electrical power as well as various electrical applications. We are committed to lasting sustainable development and our goal is to be a leading company in green energy efficiency and distribution. Our products, manufactured in seven countries, are environmentally friendly, energy efficient and leave a minimum carbon footprint.

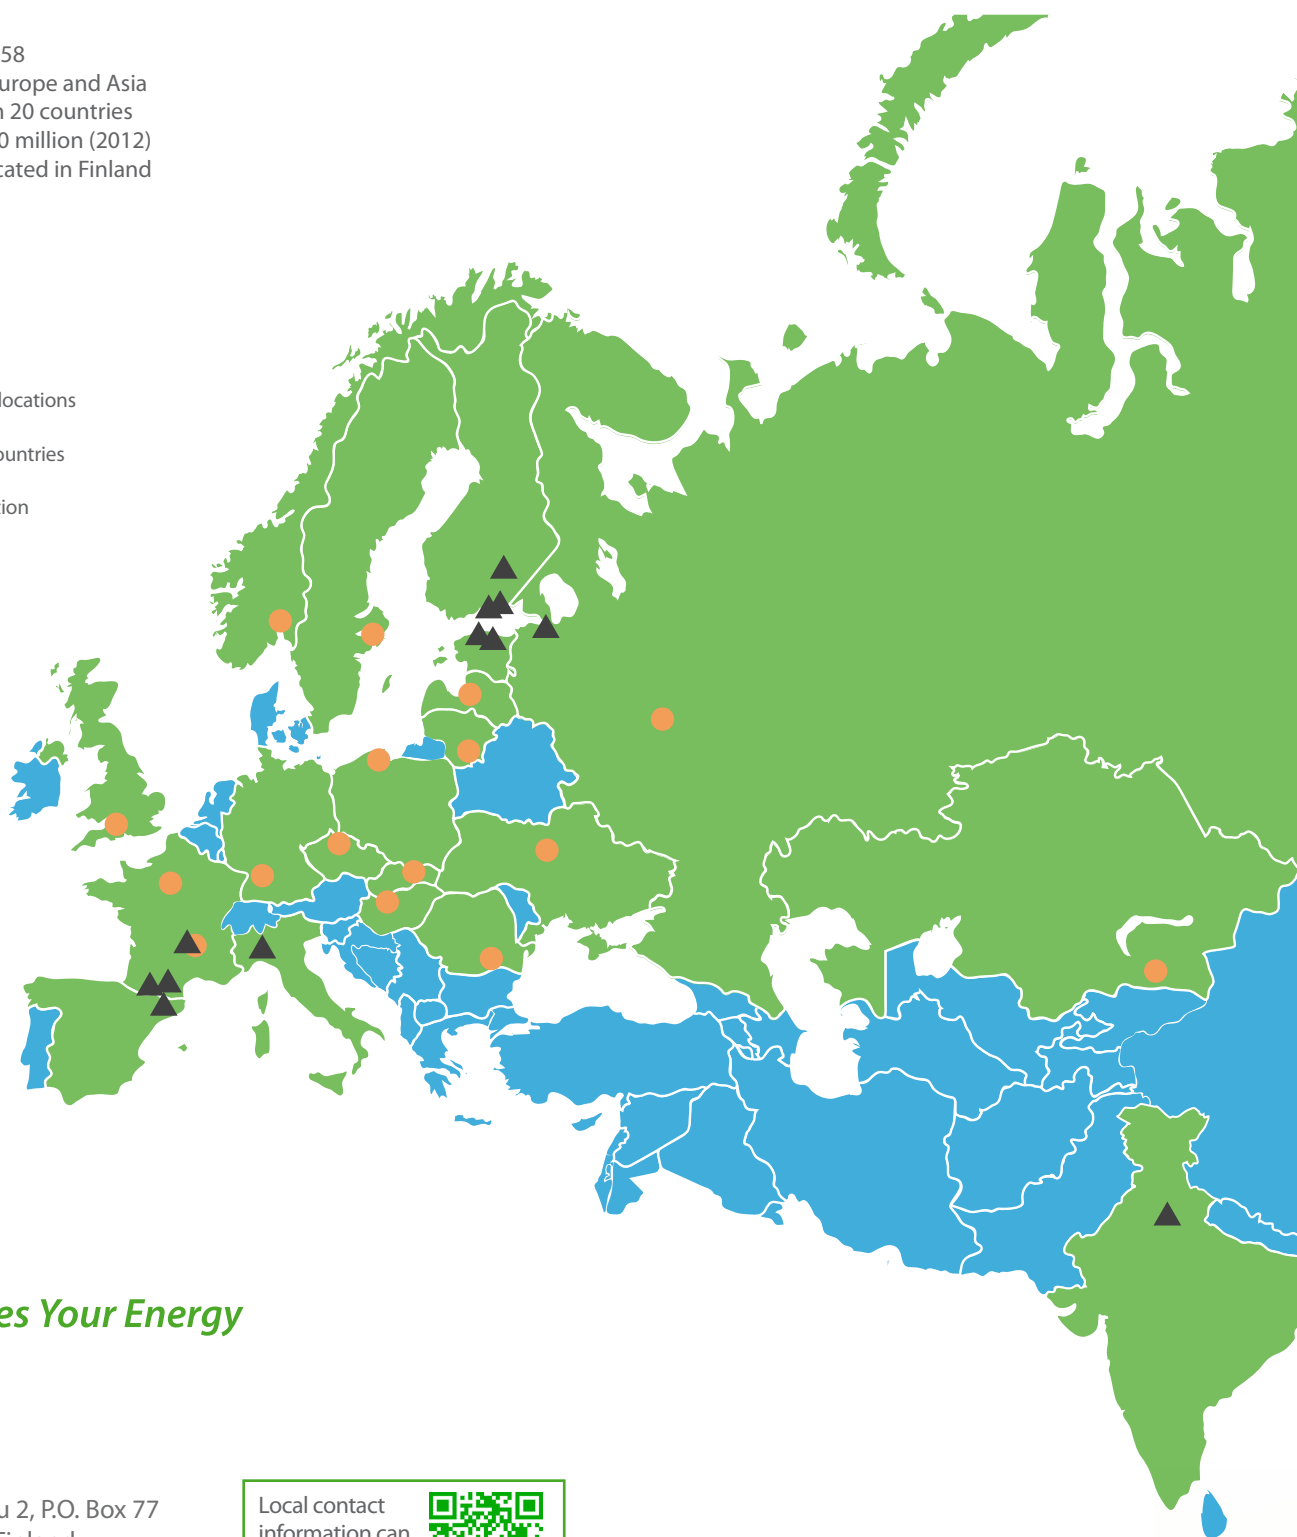

Cleantech

Cleantech refers to all those products, services, processes, and technologies which prevent or reduce the impact of harmful actions on the environment. Cleantech stands for higher quality, efficiency, and profitability. Ensto and other Finnish companies are already world leaders in several key cleantech sectors.
